Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-2,7,20,24 are rejected under 35 U.S.C. 102(b) as being anticipated by Ono (JP 11-284992 A)).

As to claims 1,20 Ono teaches a method comprising:

receiving an input voltage for a digital power rail of a display (Drawing 1, output of item 2e);

regulating the input voltage to a start-up voltage during a start-up period (Drawing 1, item 5, Solution); and

regulating the input voltage to a steady-state voltage after the start-up period, said steady-state voltage being lower than the start-up voltage (Drawing 1, item 5, Solution).

As to claim 2, the digital power rail of the display powers a panel controller (Drawing 1, output of item 2e and item 6).

As to claim 7, Ono teaches an apparatus comprising:

a digital power rail to receive an input voltage for a display (Drawing 1, output of item 2e);

a voltage regulator to regulate the input voltage to a start-up voltage during a startup period (Drawing 1, item 5, Solution), and regulate the input voltage to a steady-state Application/Control Number: 10/750,182

Art Unit: 2629

voltage after the start-up period, said steady-state voltage being lower than the start-up voltage (Drawing 1, item 5, Solution).

As to claim 24, Ono teaches a system comprising:

a LCD (Drawing 1, item 3); and

a power supply coupled to LCD (Drawing 1, items 2b,2e,5), power supply comprising:

a digital power rail to receive an input voltage for a display (Drawing 1, output of item 2e);

a voltage regulator to regulate the input voltage to a start-up voltage during a start-up period (Drawing 1, item 5, Solution), and regulate the input voltage to a steady-state voltage after the start-up period, said steady-state voltage being lower than the start-up voltage (Drawing 1, item 5, Solution).

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 3-5,12,21-22,27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ono in view of Morita (US 6,727,681 B2).

As to claim 3, Ono does not disclose the start-up voltage is substantially equal to input voltage.

Application/Control Number: 10/750,182

Art Unit: 2629

Morita teaches the start-up voltage is substantially equal to input voltage (Fig. 3, items 102,104,108, Col. 8, Lines 11-18).

It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate teachings of Morita into Ono system in order to enable quick startup with high efficiency and low power consumption (Col. 1, lines 64-67 in the Morita reference).

As to claims 4,21 Morita teaches passing the input voltage during start-up period (Fig. 3, items 102,104,108, Col. 8, Lines 11-18).

As to claim 5,22 Morita teaches linearly biasing the input voltage down to the steady-state voltage (Fig. 3, items 102,104,108, Col. 8, Lines 11-18).

As to claim 12,27 Morita teaches linear voltage regulator (Fig. 8, items Sw1,SW2,C3-C4, Col. 10, Lines 34-49).

5. Claims 6,8-9,23,25-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ono as applied to claims 1,7,20,24 above, and further in view of Fukumoto (US 6,927,989 B2).

Ono does not disclose a pulse width modulator with different duty ratios.

Fukumoto teaches a pulse width modulator with different duty ratios (Fig. 1, items 1P,2P,131, Col. 5, Lines 47-56).

It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate teachings of Fukumoto into Ono system in order to enable quick startup with high efficiency and low power consumption.

Allowable Subject Matter

6. Claims 10-11,13-19,28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Relative to claims 10-11 the major difference between the teaching of the prior art of record (Ono, Morita and Fukumoto) and the instant invention is that first dyty ratio is 1 and second duty ratio is 2.5/3.3.

Relative to claims 13 and 28 the major difference between the teaching of the prior art of record (Ono, Morita and Fukumoto) and the instant invention is that claims 13,28 are detail description of circuit diagrams.

Claims 14-19 depend on claim 13.

Telephone Inquire

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Leonid Shapiro whose telephone number is 571-272-7683. The examiner can normally be reached on 8 a.m. to 5 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Hjerpe can be reached on 571-272-7691. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2629

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
